

# Questions to be asking about the indicators

In groups of 2-3, go through the indicator list and try to answer the following questions:

- Will people in your landscape understand this indicator?
- How will this indicator be measured? Is scoring it from 1-5 / negative –positive enough to understand what is going on in the landscape in relation to that indicator?
- Do you expect to see a change in the course of my project? In what timeframe could you expect to see a change/trend in this indicator?
- Which indicators will be difficult to collect?
- Who in your candidate landscape can answer these questions, or who should be present to provide their input?
- Are there other indicators you would use? What ecological indicators might be missing?
